SIMATS ENGINEERING

Lab Programs

COURSE CODE: CSA0705 COURSE NAME: Computer Networks

EXPERIMENT 1: CONFIGURATION OF NETWORK COMPONENTS

Aim:

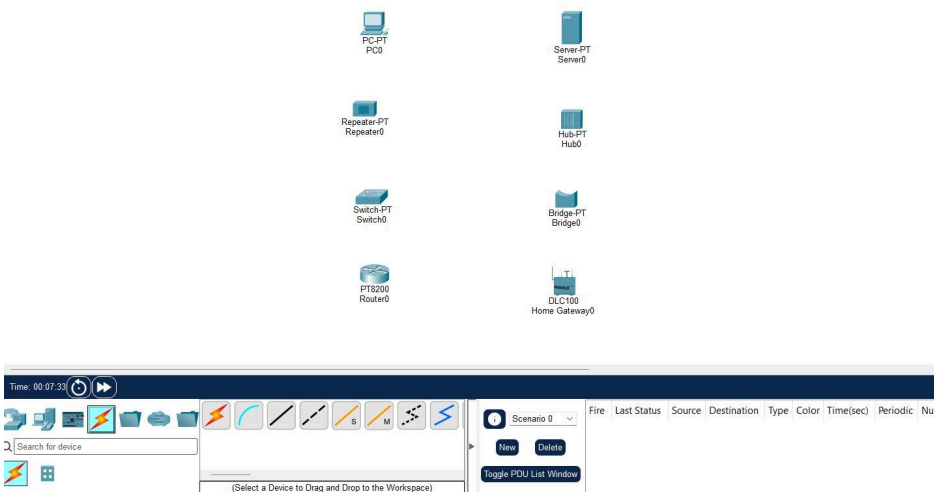

To study the different network components using Cisco Packet Tracer.

Software Used: Cisco Packet Tracer.

Algorithm / Procedure:

- Open Cisco Packet Tracer.
- Select the required network devices from the device selection panel.
- Place the PC, server, repeater, hub, switch, bridge, router, and home gateway in the workspace.
- Identify each network device and study its function.
- Study the different transmission media used to connect network devices.
- Observe the devices and understand their roles in computer network communication.

Execution Screenshot:

Result:

Thus, the different network components were successfully identified and studied using Cisco Packet Tracer.
