EXPERIMENT 4: IMPLEMENTATION OF RING TOPOLOGY USING PACKET TRACER

Aim:

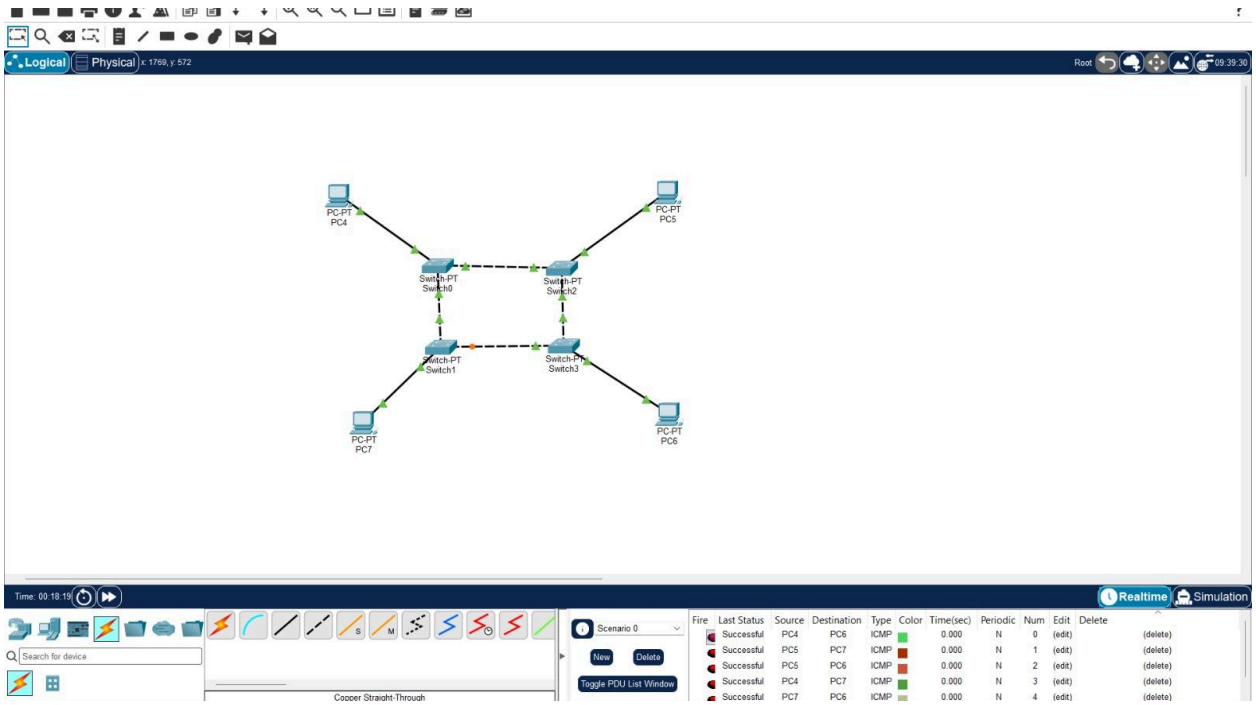

To implement a ring topology using Cisco Packet Tracer and transmit data between the connected devices.

Software Used: Cisco Packet Tracer.

Algorithm / Procedure:

- Open Cisco Packet Tracer.
- Place four switches and four PCs in the workspace.
- Connect the switches in a closed loop to form a ring topology.
- Connect each PC to a switch using copper straight-through cables.
- Configure unique IP addresses and subnet masks for all PCs in the same network.
- Use the Add Simple PDU tool to send ICMP packets between the PCs.
- Verify the connectivity by checking the PDU status.

Execution Screenshot:

Result:

Thus, the ring topology was implemented using Cisco Packet Tracer, and data transmission between the connected devices was verified successfully.
