EXPERIMENT 5: IMPLEMENTATION OF MESH TOPOLOGY USING PACKET TRACER

Aim:

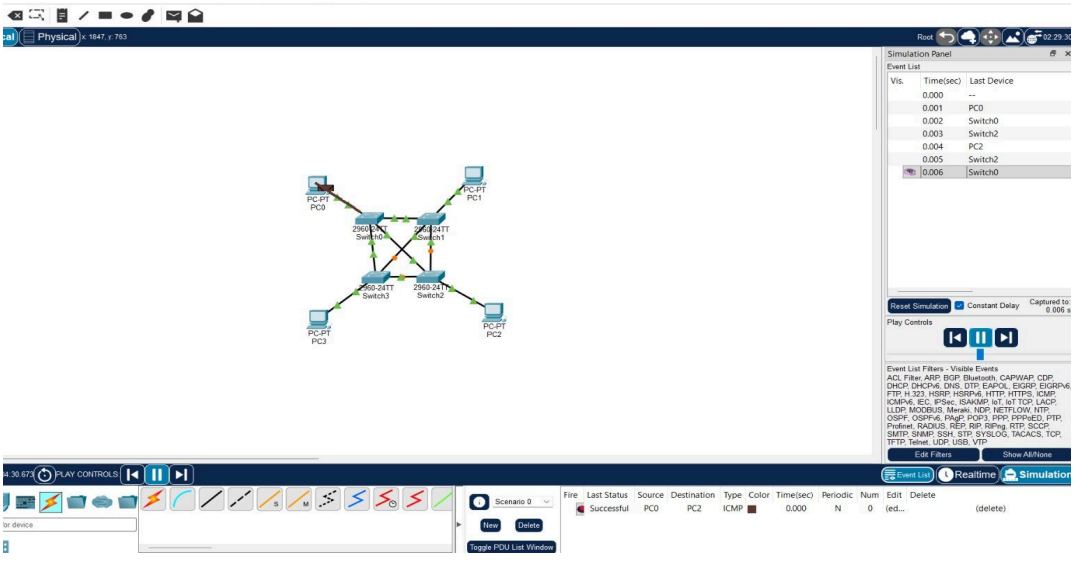

To implement a mesh topology using Cisco Packet Tracer and transmit data between the connected devices.

Software Used: Cisco Packet Tracer.

Algorithm / Procedure:

- Open Cisco Packet Tracer.
- Place four PCs and four switches in the workspace.
- Connect the switches with multiple links to form a mesh topology.
- Connect each PC to a switch using copper straight-through cables.
- Configure unique IP addresses and subnet masks for all PCs in the same network.
- Use the Add Simple PDU tool to send an ICMP packet from PC0 to PC2.
- Verify the connectivity by checking the PDU status.

Execution Screenshot:

Result:

Thus, the mesh topology was implemented using Cisco Packet Tracer, and data transmission between the connected devices was verified successfully.
